Tekerlekler:

Genelde endüstriyel ortamlarda, evsel kullanım araçlarında, atmosferik dış ortamlarda kullanılan tekerlekler, çoklukla düşük hızlarda ve/veya durağan koşullarda kullanılmaktadır.

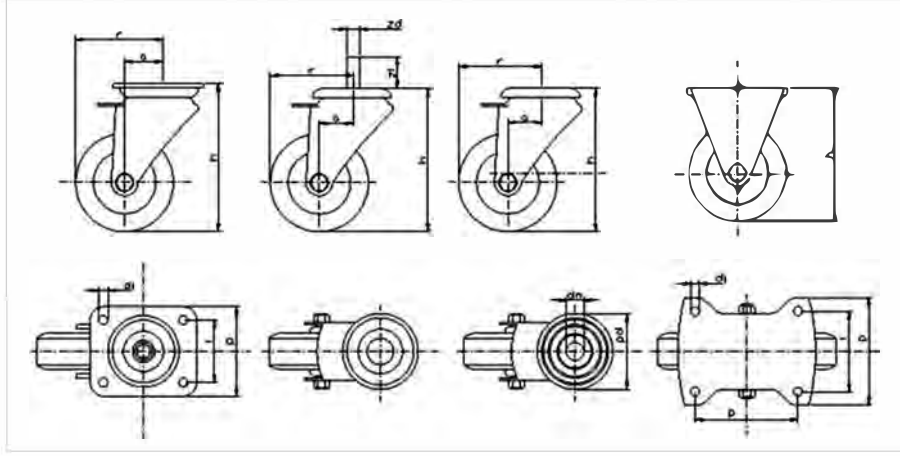

İhtiyaca cevap verebilmesi açısından genel olarak iki tip tekerlek sınıflandırması yapılmaktadır.

1- Oynak (kendi düşey eksenini etrafında dönen) tekerlekler;

Oynak tekerlekler, bir döner maşa ve ona akslanmış bir teker, eksenel dönme kabiliyeti veren bir yataklama ve taşıyacağı gereç ile bağlanacak bir tabla, pim veya civatadan oluşmaktadır. Hem radyal hem eksenel dönme hareketi yapar.

2- Sabit (düşey ekseninde dönme özelliği bulunmayan) tekerlekler;

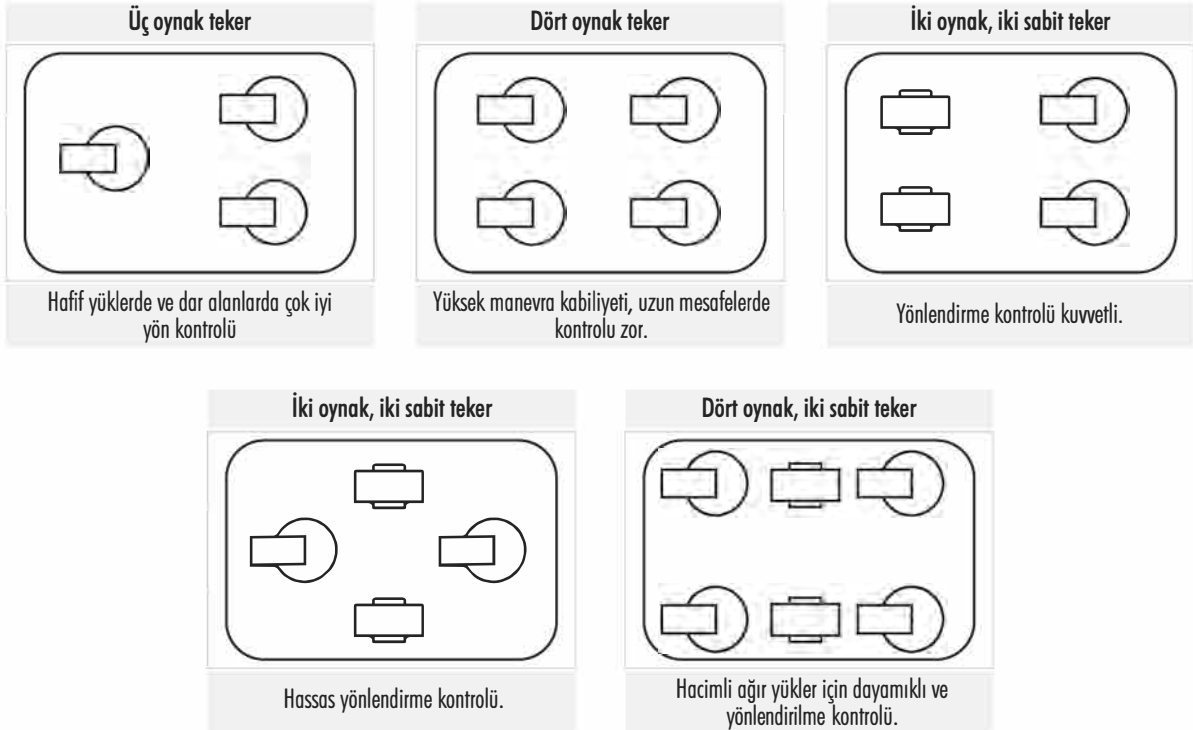

Sabit bir maşa üzerine akslanmış bir tekerden ibaret olup, sadece radyal dönme hareketi yapar.

Tekerlek seçiminde yardımcı olabilecek görüşler:

Tekerleklerin kullanıldığı araçlarda en önemli nokta kolayca hareket ettirilebilmesi ve ekonomik olmasıdır. Aşağıda bazı uygulama örnekleri gösterilmiştir.

Tekerlek seçiminde önemli özellikler 1. Taşıma yükü, 2. Zemin özellikleri (toprak, beton, seramik, vs.), 3. Elle veya motorla hareket verileceği, 4. Ortamın şartları (tozlu, nemli, yüksek sıcaklık şartları içeren ortamlar), kullanılacağı sektörle ilgili özel vasıflar (kimya, ilaç, vs. sanayi ortamları.)

KODLAMA SİSTEMİ: Kodlama sistemi üç grupta incelenir. Bunlar;

BİRİNCİ GRUP:

Maşa konstrüksiyonunun tipini ve niteliklerini belirtir.
(Ağır tip, hafif tip vb. gibi)

İKİNCİ GRUP:

Teker tipini ve niteliklerini belirtir.
(Lastikli, döküm vb. gibi)

ÜÇÜNCÜ GRUP:

Teker çapını mm. cinsinden belirtir.

Birinci Grup: Bu grup ürünün serisini, maşa, tabla ve bağlantı tipini belirtir.

Soldan sağa doğru birinci rakam, ürünün hangi seriden olduğunu gösterir.

1. Mobilya serisi tekerlekler
2. Market tekerlekleri
3. Orta yükler için tekerlekler ve inox serisi tekerlekler
4. Ağır yükler için tekerlekler
5. Hastane serisi tekerlekler
6. Hafif yükler için tekerlekler

Soldan sağa doğru ikinci rakam, üründe hangi tip maşa kullanıldığını ifade eder. Aynı üründe (Malzeme kalınlığı, form farklılığı vb.). farklı maşalar kullanıldığında bu rakam değişir.

Soldan sağa doğru üçüncü rakam, tabla tipini belirtir.

Soldan sağa doğru dördüncü rakam, ürünün bağlantı tipini belirtir.

0. Merkez delikli oynak teker.
1. Civata bağlantılı oynak teker.
2. Tablalı oynak teker.
3. Pim bağlantılı oynak teker.
4. Sabit maşalı teker.

Casters:

Casters are used in very low speeds or static applications especially in industrial applications, in home appliance vehicles, and in atmospheric external environments.

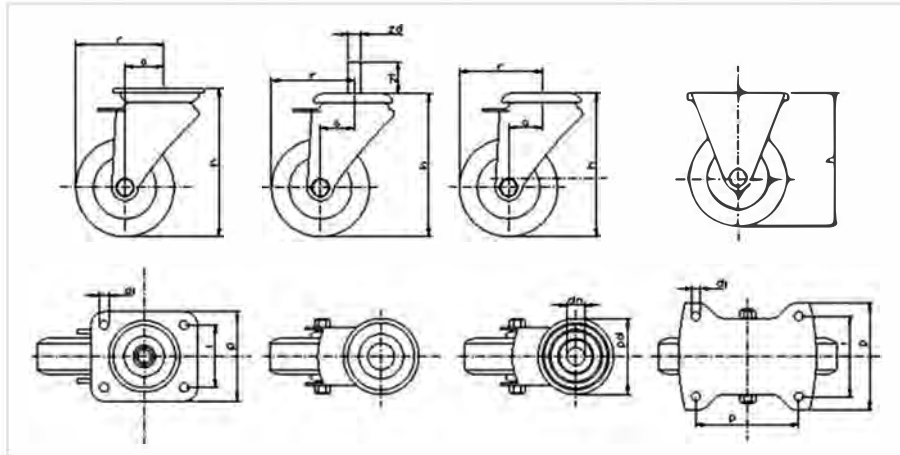

There are two main types of casters that are suited to the necessary purpose.

1- Swivel casters(turns on its own vertical axis);

Swivel casters are made from rotation pincers and a wheel attached to its axis. It is able to rotate or turn both radially and axially. Its made on a flat surface with ability to rotate axially with the load it is supposed to carry.

2- Fixed casters(Doesn't turn on its vertical axis);

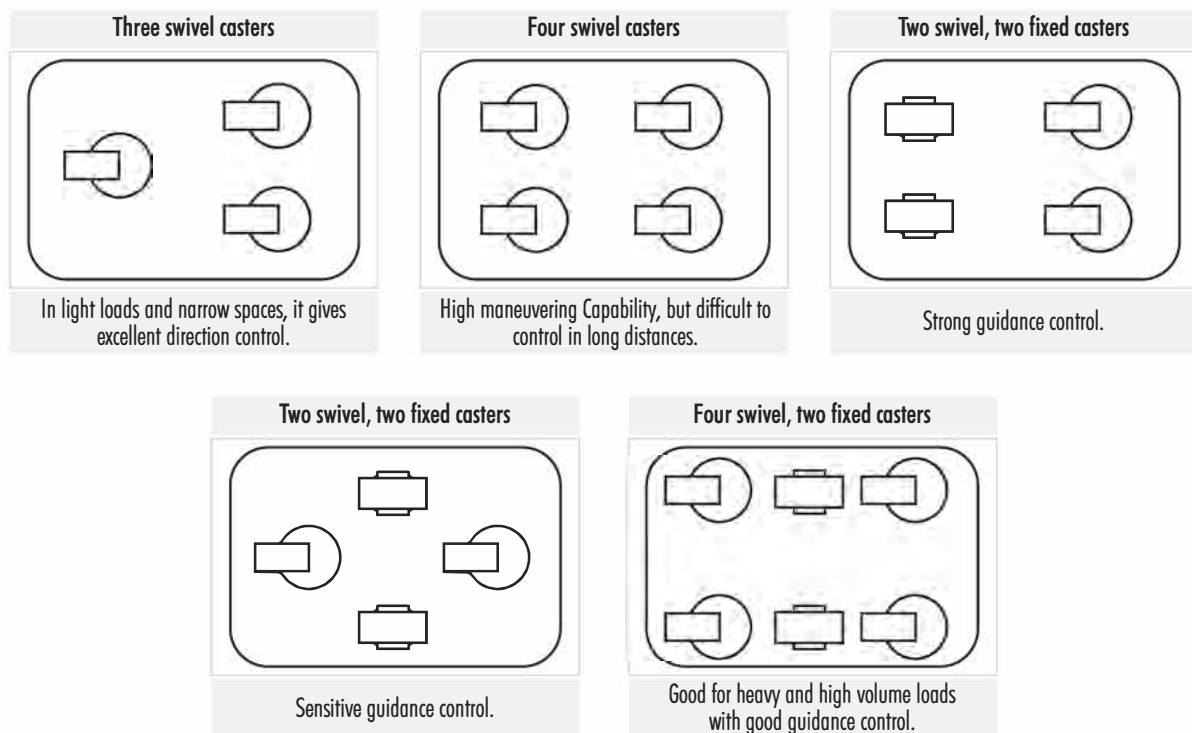

Its made on a stationary pincers wheel and can only turn radially.

Views in Selecting casters:

The most important thing in selecting casters is its easy maneuverability and it being economical.

Some application examples are: 1. Carrying Load, 2. Surface properties(soil, cement, ceramic etc.), 3. Manual or Engine Powerment, 4. Environment properties (dusty, moist, high temperature gradients) and quality requirements for its intended sector (chemistry, medicine etc).

CODING SYSTEM: Coding system has three groups. These are:

FIRST GROUP:

Indicate the type and specification of mounting. (Heavy type, light type etc)

SECOND GROUP:

Indicate wheel type and the specification (rubber caster etc.)

THIRD GROUP:

Indicate wheel diameter.

First Group: This Group indicate the series, fork, plate and the connection type of the product.

From left to right, the first numerical indicates from which series the product is.

1. Furniture casters
2. Market casters
3. Medium duty casters and inox casters
4. Heavy duty casters
5. Medical serie hospital casters
6. Light duty casters

From left to right, the second numerical indicates what type of forks is used in the product.

The numeral will change if different forks are used in the same product. (Material thickness, form difference etc)

From left to right, the third numeral indicates the plate type.

From left to right, the third numeral indicates the connection type of the product.

0. Bolt hole swivel caster
1. Screw stem swivel caster
2. Top plate swivel caster
3. Stem swivel caster
4. Fixed caster

Second Group: This group give us, technical specification of the wheel of the caster.
